

Problem Statements

Financial Services :-

AI Threat Detection for Financial Institutions: Implement an AI system to enhance threat detection and response in financial institutions, protecting sensitive data and assets. The objective is to prevent data breaches and financial fraud. The expected outcome is improved security and customer trust.

Financial Services :-

Expand insurance accessibility to India's Rural Areas: Develop a virtual agent to enhance insurance accessibility in India's rural areas via a digital platform. It will educate communities on insurance products, simplify complex concepts, and improve understanding. The agent will recommend suitable products based on surveys, assist with purchases, and provide after-sale support.

ESG:-

Environmental Impact of Generative AI: Develop a framework or Tool to assist Allianz and its customers in evaluating and managing the environmental impact, energy consumption, and CO2 footprint of Generative AI applications. The objective is to offer metrics and strategies that help reduce the ecological footprint of these technologies. The anticipated result is enhanced sustainability practices within Allianz and among its clients, promoting a more environmentally responsible approach to Gen AI usage

Social Responsibility:-

Educational-Digital Safety App: Develop a mobile app that educates kids and the elderly about digital safety using games, stories, and interactive content. The app should tailor content based on age group and include a chat interface for users to ask questions. The objective is to simplify digital safety concepts and enhance user understanding.

Social Responsibility :-

Women Safety App: Develop a mobile app with life-saving features for women in critical situations. The app should offer tools and resources to enhance personal safety. The objective is to provide reliable support and protection for women in emergencies.

Social Responsibility:-

School Management System for Government Schools: Design a system to help government schools record student skills, scores, and attendance, and share this information with parents. The system should digitize school transfers, certificates, and facilitate tuition/exam fee payments. The expected outcome is streamlined school management and improved communication with parents.

Evaluation Parameters: The information provided on this slide is intended to guide you in preparing your submission accordingly.

Sr. No.	Evaluation Parameters
1	Ease of Use/User Experience (UX): The importance of an intuitive and user-friendly interface is a recurring theme across various applications. (Example: User Experience, Usability and Accessibility, etc.)
2	Security and Privacy: Ensuring robust data protection and compliance with relevant regulations. (Example: Data Protection, Safety and Security, Data Privacy and Security, etc.)
3	Integration and Compatibility: The ability to integrate with other systems, devices, and platforms. (Example: System Integration, Multi-Platform Compatibility, Device Compatibility, etc.)
4	Engagement and Interactivity: Incorporating elements that engage users and make the experience interactive. (Example: Gamification Elements, User Engagement, Social Connectivity, etc.)
5	Accuracy and Relevance: Ensuring the information provided is accurate, current, and contextually relevant to problem statement.

Important Note for Students: Please ensure that your idea submission addresses each evaluation parameter, as this will assist the jury in accurately assessing or evaluating your submission.

Problem Statement: *[Please specify the problem statement you have selected for submission.]*

Idea Description:

Tool/Coding Language/Platform/Application to be used & How?:

Frontend (Technologies used to build the user interface and client-side functionality)	Backend (Server-side technologies that manage data and business logic)	Database (Systems used to store and retrieve data efficiently and securely)	DevOps (Practices and tools for automating software deployment and infrastructure management)	Testing (Tools and methods to ensure software quality and performance)	Security (Measures to protect software and data from unauthorized access and breaches)	Collaboration (Tools that facilitate teamwork, project tracking, and communication)

Recommended or Best Possible Solution(s):

Solution Implementation Plan:

Potential Benefits:

Please include a 'Wireframing Design' for your recommended solution

***What is Wireframing Design?:** Wireframing is a process where designers draw overviews of interactive products to establish the structure and flow of possible design solutions. These outlines reflect user and business needs. Paper or software-rendered wireframes help teams and stakeholders ideate toward optimal, user-focused prototypes and products.*

Timeline

		2025		
Sl no	Task	October	November	December
1	College Registration window			
2	Mettl Registration: Ideathon/Problem Statement Distribution			
3	Ideathon solution timeline for students			
4	Ideathon review and first level shortlisting			
5	College visit for review Ideathon presentation of shortlisted projects			
6	Ideathon results			
7	Felicitation of scholarships Trivandrum			
8	Felicitation of scholarships Pune
